# Help File

This template is created using Adobe Photoshop Smart Object Layers. To edit the file, you need to place your graphics in the Smart Layer labeled "Edit Content" (highlighted in green).

To do this, double-click on the thumbnail of the layer (the small rectangular image associated with the layer, not the layer itself). This will open a new tab.

This will open a new tab. Delete the "Delete Me" layer, and then drag and drop your own image onto the remaining layer.

Save the changes by pressing Cmd+S (or Ctrl+S). Afterward, close the Smart Layer and observe the effect being applied in the main tab!
